

Tempbar

TEMPORARY CONCRETE BARRIER

Each Tempbar unit can be positioned easily by forklift for use as temporary or permanent barriers. The interlocking profile provides a secure joint between each 1500mm long unit, simplifying the laying of continuous runs.

Units may be painted to provide higher visibility to enhance route management or when used as protection around vulnerable assets.

Traffic Applications

- Traffic management in construction areas
- Pedestrian safe space walkways
- Temporary entrance control
- Boundary setting in carparks

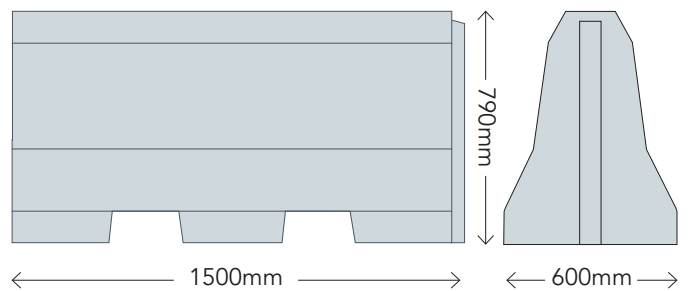

Safety Applications

- Buffer zones around assets
- Health and safety on building sites
- Restricting public access
- Waterside protection

Retaining Applications

- Fast assembly of temporary earth retention
- Material storage
